Is Your Child Constipated?

More fiber, liquids, and lots of activity can help!

Whole grain breads and cereals, vegetables and fruits are especially good sources of fiber. Here are a few examples:

**Fruits**
- Pears
- Dried fruits
- Apples
- Berries
- Bananas

**Beans and Nut Products**
- Pinto, black, and kidney beans
- Dried peas (split peas)
- Lentils
- Peanut butter

---

**Menus**

**Day 1**

**Breakfast**
- Scrambled egg
- Bran muffin
- Prune juice
- Milk

**Snack**
- Pear with skin
- Water

**Lunch**
- Lentil soup
- Tuna sandwich on whole wheat bread
- Milk

**Snack**
- Whole grain crackers with peanut butter
- Water

**Dinner**
- Tacos with beef and beans
- Cooked carrots
- Fresh fruit salad
- Milk

---

**High Fiber Menu Suggestions for Toddlers and Children**

**Whole Grain Products**
- Whole grain breads
- Whole grain crackers
- Popcorn

**Hot & Cold Breakfast Cereals**
- 100% bran cereal
- Shredded wheat cereal
- Oatmeal

**Cooked Grains**
- Brown rice
- Barley

**Cooked Vegetables**
- Carrots
- Peas
- Broccoli
- Cooked spinach or other greens
- Summer and winter squash
- Sweet potatoes

---

Children under age 4 can choke more easily on foods such as popcorn, nuts, dried fruit, and raw vegetables. Cut foods into small pieces and stay close by.
Does your child have hard, dry stools (poops) that are difficult to pass? Your child may have constipation.

Signs of constipation may include:

- Stomach pain or pain while having a bowel movement
- Less than three bowel movements a week
- Dry, hard stools that are difficult to pass

Things to know:

- Always check with your health care professional if the problem persists.
- Laxatives, suppositories, enemas, and mineral oil are not recommended. These can cause health problems for your child.
- If the stool is soft, your child is likely not constipated.

What can cause constipation?

- Not eating enough fiber-rich foods
- Not enough movement or activity
- Holding bowel movements
- Dehydration due to vomiting or fever
- Some medical conditions or medications

In babies:

- Baby formula mixed wrong
- Solid foods started too early, before 6 months

In toddlers and young children:

- Not drinking enough liquids
- Too many processed foods low in fiber
**Babies Under 6 Months**

During the first month, babies may have a few stools (poopy diapers) a day. After one month, babies have fewer stools each day or even a stool every few days. Babies who drink formula tend to have firmer stools than babies who are breastfed; this is not constipation.

**If you think your baby may have constipation:**
- Check with your health care professional to be sure your baby is getting enough breastmilk or formula. Be sure you are mixing the formula correctly.
- Put a warm washcloth on your baby’s stomach.
- Do not change formulas unless your health care professional tells you to do so.
- Breastfeed more often.
- Give your baby tummy time. It helps your baby’s head, neck and upper body muscles develop.

**Babies Over 6 Months**

Help your baby be more active. Encourage baby to move or crawl on the floor.

**If you think your older baby has constipation:**
- Give your baby more liquids. Twice a day, you can offer 4 ounces of plain water or 2 ounces of prune, pear or apple juice mixed with 2 ounces of water.
- Give your baby more foods with fiber, like soft fruits and soft cooked vegetables.
- Soften one teaspoon of 100% bran cereal with breastmilk or formula and add this to your baby’s food.
Babies Under 6 Months

Help your baby be more active. Encourage baby to move or crawl on the floor.

If you think your older baby has constipation:

• Give your baby more liquids. Twice a day, you can offer 4 ounces of plain water or 2 ounces of prune, pear or apple juice mixed with 2 ounces of water.
• Give your baby more foods with fiber, like soft fruits and soft cooked vegetables.
• Soften one teaspoon of 100% bran cereal with breastmilk or formula and add this to your baby's food.

Babies Over 6 Months

Toddlers and Young Children

• Offer your child a variety of foods high in fiber. Whole grain breads and cereals, vegetables, and fresh fruit are especially good.
• Be sure your child gets to play actively every day!
• Give your child plenty of liquids, especially water, every day.
• Encourage your child to use the bathroom often and regularly.
• Set aside a quite time for using the toilet.
• Limit milk to 2 cups (16 ounces) a day.

What can cause constipation?

• Not eating enough fiber-rich foods
• Not enough movement or activity
• Holding bowel movements
• Dehydration due to vomiting or fever
• Some medical conditions or medications
